FileFlow

SELF-HOSTED FILE PLATFORM

Own your files. Without giving up the cloud experience.

FileFlow is a modern, self-hosted file manager that gives teams secure sharing, collaboration, and previews — running entirely on your own server. The polish of Dropbox, the privacy of on-prem, in a single container.

1 container
Deploys in minutes with Docker

$0 / seat
No per-user cloud fees, ever

100% yours
Your server · your data · your rules

EVERYTHING TEAMS NEED

One place for files — fast, friendly, complete

From drag-and-drop uploads of huge files to rich in-browser previews, FileFlow covers the full day-to-day workflow your users expect from a premium cloud tool.

Resumable uploads

Drag-and-drop with chunked, resumable transfers — multi-gigabyte files survive flaky connections.

Rich previews

Images, video, audio, PDF, Markdown, CSV, Excel, Word & PowerPoint, plus code with syntax highlighting.

Smart share links

Public links with passwords, expiry dates, and download limits — including one-time links.

Team collaboration

Shared folders and direct user-to-user shares with read or read-write access, all inside the app.

Upload requests

Send a “drop box” link so clients and partners can upload to you — no account required.

Versions & trash

Automatic file versioning and a 30-day recycle bin mean nothing is ever lost by accident.

Search & tags

Full-text search, tags, and collections keep large libraries instantly navigable.

Polished & localized

Light/dark themes, keyboard shortcuts, and English & French out of the box.

SECURITY BY DESIGN

Built for data you can't put in someone else's cloud

FileFlow ships with the controls security and compliance teams ask for — and the codebase is hardened against the file-sharing attack patterns that matter.

- **Two-factor authentication**
  TOTP (authenticator apps) with single-use recovery codes.
- **Role-based access control**
  Roles, groups, granular permissions and per-path restrictions.
- **Full audit trail**
  Every login, share and file action logged and exportable to CSV.
- **Session control & quotas**
  Instant "log out everywhere", admin revoke, per-user storage limits.
- **Hardened by default**
  Strict CSP, secure cookies, rate-limited logins, path-traversal protection.
- **Your data stays put**
  Self-hosted on your infrastructure — no third-party data processors.

HOW IT COMPARES

FileFlow vs. public cloud storage

	FILEFLOW	PUBLIC CLOUD DRIVES
Where your data lives	**Your own server**	A vendor's datacenter
Pricing model	**One deployment, unlimited users**	Recurring fee per seat
Admin & audit control	**Full, self-managed**	Limited to vendor tooling
Custom retention & policy	**You decide**	Vendor-defined
Vendor lock-in	**None — files on disk**	High

WHO IT'S FOR

Made for teams that value control

Wherever data sensitivity, cost, or sovereignty rules out public cloud drives, FileFlow fits.

🏢

SMBs & agencies

A shared drive and client portal without per-seat SaaS bills.

🛡️

Regulated industries

Healthcare, legal & finance teams that must keep data on-prem.

👩‍💻

IT & MSPs

A white-labelable file platform you run for yourself or clients.

EFFORTLESS DEPLOYMENT

Live in three steps

1. **Pull & configure**
   One image, a few environment variables — no external database to manage.

2. **Run it anywhere**
   A VPS, a NAS, or your datacenter. SQLite-backed, single container.

3. **Invite your team**
   Create users & groups, set quotas, and start sharing securely.

```
# Up and running in under a minute
$ docker compose up -d

# That's it — open the app
✓ Live at https://files.acme.io
```

Bring your files home.

Give your team the file experience they love — on infrastructure you control, with security you can prove. Let's set up a tailored demo for your environment.
